

# STAT 486/686: Computational Finance I: Market Models

Date: Spring 2023; Course 21050/20164  
Time: TTh 10:50 am – 12:05 pm  
Location: Maxfield Hall MXF 252

## Instructor

Prof. John A. Dobelman  
[dobelman@stat.rice.edu](mailto:dobelman@stat.rice.edu)  
Maxfield Hall 226: 713 348 5681  
Office Hours: Wed 3-4, or by appointment

## Course Website

<http://dobelman.rice.edu> (see courses)  
We will also be using Canvas

## Teaching Assistant (TA)

TBD, [tbd@rice.edu](mailto:tbd@rice.edu)  
Maxfield Hall TBD,  
Office Hours: By appointment

[Data Access](#)  
[Other Provisions](#)

## Course and Outcomes

Standard computational finance courses routinely use tools based on the Efficient Market Hypothesis (EMH) and the perceived necessity of closed form mathematical expressions to describe financial markets observables. Extensive data analysis shows that the EMH is seriously flawed as are the tools based upon it. This is a course based on the analysis of market data without pre-conceived assumptions. Computer simulation will be utilized as a means of answering "what if?" sorts of questions.

The prerequisites for this course are a good practical background in statistics and its uses and an ability to write model-based computer programs (using whatever computer language the student finds appropriate). Graduates of this course will be able to approach analytically intractable problems with practical solutions, and will be able to perform value-added quantitative financial analysis of a wide variety of real-world scenarios in a minimum timeframe.

### **Course Text (Required):**

Thompson, James R., Williams, Edward E., and Findlay, M. Chapman, (2003). "[Models for Investors in Real World Markets](#)". Hoboken, N.J.: John Wiley & Sons. ISBN-10: 047135628X; ISBN-13: 978-0471356288

A. Ilmanen, (2011). "[Expected Returns, an Investor's Guide to Harvesting Market Rewards](#)," New York: John Wiley and Sons, Inc. ISBN: 978-1-119-99072-7

Benoit B. Mandelbrot and Richard L. Hudson (2004). "[The \(Mis\)Behavior of Markets: a Fractal View of Financial Turbulence](#)." New York: Basic Books. ISBN: 0465043550.

[Other recommended titles](#) which will be of interest to students of this class (see end of syllabus)

Students are expected to have purchased their required texts during the first week of class. If the text is available at the "Rice" bookstore, and the student elects to purchase the book elsewhere, and this elsewhere-obtained book is not in hand, the student is nonetheless responsible for all assignments and readings. Rice University is generally not able to provide copies of these texts for your use.

### **Modifications due to Covid-19**

Due to the prevalence of the Covid-19 virus precautions, several modifications to the course execution are required as outlined in this paragraph. Class sessions will be recorded using the Zoom cloud-based recordings. The requirement for hardcopy assignment submission is suspended; all assignment submissions and grading will be based on the online submissions. Attendance and class participation will be assessed by participation in the classroom and Zoom sessions; all participants are expected to turn on their video. Declining to use the student video will be accounted for in the class participation portion of the course grading (see applicable syllabus section on grading). Project presentations, if any, will be conducted in person. TA session and instructor office hour appointments will be conducted in-person (with social distancing), or online in accordance with the applicable preferences.

### **Course Content**

Topics/chapters include

1. Introduction. Review of STAT 482/682 course.
- 2 Stock price growth as noisy compound interest.
3. Stock progression using differential equations. A geometric Brownian motion for stocks.
4. Investing in real world markets: Returns and risk profiles.
5. Aggregate economic factors influencing risk. Some events in US financial history. Student Group Mini-Project Class Presentations.
6. International monetary policy and the nature of financial collapse. What is a statistician to do with exogenous factors outside one's control?
7. Black-Scholes and the search for risk-neutrality.
8. Alternative pricing models
9. Portfolio examples. Student Group Mini-Project Class Presentations.

10. Summary. Unsettled (unsettling) questions and conclusions.
11. Ending on a controversial note. More realistic paradigms for investment.
12. Conclusions and Look Ahead. Student Group Final Project Class Presentations.

## Course Policies

### Undergraduate/Graduate Course Designation

The STAT 686 designation is intended for graduate students duly admitted into a graduate course of study at Rice University. In certain exceptional cases, undergraduates may petition to take the STAT 686 version, but GPA and other criteria will be applied. STAT 686 requires additional coursework and will be evaluated at a graduate level.

### Grading

Grading for this course will consist of homework exercises from the text (20%), "Mini-Projects" (25%), a final project (35%), Class Participation (10%), and a Team Evaluation (10%, consisting of [self-, peer- and instructor evaluations](#)). The homeworks, mini-projects and final project are to be completed as team projects. Students taking the graduate-level STAT 686 will have additional assignments, with the same grading breakdown as STAT 486. *Note that an "A" average in classwork can be offset by low class and group participation grades!*

### Group Formation and Dynamics

Most assignment will be completed in a group of your choosing. You will stay with this group for the balance of the semester. Groups should be approximately 3-4 persons each; larger numbers require approval of the instructor. It is wise to form with persons of complementary skill sets, e.g., strong coding, knowledge of markets, knowledge of statistics, good English writing, etc. You will communicate your group members to the TA who will update the instructor. Do not mix 486 and 686 students, or else all will be graded at the 686 level.

In the interest of "fairness", every team member is expected to "pull their weight;" for each project the team members will rate the performance of all the other members. Too much granularity in ranking is not useful, if the team is working effectively then a 10 for each member is appropriate. If a member has a rating of less than 8 out of 10, it is the responsibility of the group to critique with the low ranking member to effect improvement or solve the situation. It is expected that groups solve their own personnel issues. If this cannot be done, then the TA should be notified, or in egregious cases the instructor.

### Professional Standards - **DISREGARDING INSTRUCTIONS IN THESE DOCUMENTS WILL RESULT IN LOSS OF CREDIT!**

All assignments, with exception of handwritten math proofs and things of that nature, must be prepared in the form of a professional report. You should be able to take one of your reports/project write ups and present to the management of your employer or advisor. This means you need to organize it with appropriate layout, graphics, citations, etc. Unnecessary printouts of numbers are not acceptable, nor are meaningless digits of precision, etc. The font should be large enough for management to easily read (no less than 10-point font, preferably 11-12). You should include a cover page indicating the class, assignment, date submitted, and name of student or group members and group number. In the real world, if your management/customers or clients

cannot read the report, or if it is filled with superfluous information, they will just return it to you with a request to resubmit. If you are unlucky, they will just pass you over for someone who does these things better. Examples of good projects employing appropriate professional standards may be found in the example documents posted on Canvas.

You are encouraged to make appointments with the peer consultants at the Center for Written, Oral, and Visual Communication for your assignments in this course. These consultants do not proofread or edit your work, but they will provide feedback on topics such as the organization of your paper or presentation, the coherence of your argument, appropriate sentence structure, and grammatical errors. You can make an appointment at the Center's website: <http://cwovc.rice.edu/>. The Professional Standards checklist and other grading rubrics are posted on Canvas in the Help and Reference section of the resources.

### **Originality**

Although some assignments are not "pledged", keep in mind that plagiarism is a serious problem, and is especially problematic for the student or researcher. Plagiarism will be treated, for pledged assignments, in accordance with the honor code provisions; and for non-pledged assignments, your paper will be returned for a rewrite with the automatic deduction of one letter grade. By plagiarism we mean "quoting, paraphrasing, or otherwise using another's words or ideas as one's own without properly crediting the source." Unfortunately, with the prevalence of internet sources, it is sometimes easy to inadvertently commit plagiarism. In order to avoid this problem, you should consult this white paper <http://www.stat.rice.edu/~dobelman/courses/Plagiarism.Hewitt.2016.pdf> and [http://futureowls.rice.edu/futureowls/Honor\\_Code.asp](http://futureowls.rice.edu/futureowls/Honor_Code.asp).

### **Citation**

Any cited works in your reports must have citations listed, either as a separate section, or (less desirably) as footnotes. Exact citation format is your choice<sup>1</sup>, but be consistent.

### **Use of Canvas**

The Canvas system is the course management tool for announcements, assignments, resources, etc. **Do not email the instructor/TA** questions about the course or assignments, but rather post as a discussion on Canvas so that all can see the conversation. Any such emails will be ignored. If online submission for assignments is required, please upload in the appropriate area (usually in the assignments section).

### **Assignment Submission, Lateness and Grading Policy**

All assignments must be submitted by the date due as **hard copy** to the instructor or designee. Hard copy reports must be properly bound. The instructors/TA will not be able to bind or print out e-mailed or online-only assignment submissions. Soft copy postings may be made as of COB the day the assignment is due. Both hard and soft copies of the assignments **are required in order to receive credit** for the assignment. Late papers will in general not be accepted without a university approved excuse. A 20% penalty for HW turned in by next class may be applied; no credit for submissions later than this, although you might be able to negotiate with the grader. Additional guidance on homework submission and project policies is posted on Canvas and is also [available here](#).

---

<sup>1</sup> See for example <https://owl.english.purdue.edu/owl/section/2/>

## **Laptops and Wearable/Portable Electronic Devices (PED)**

Do not use laptops, tablets or cell phones in class unless so requested by the instructors; they are a distraction to other students. Prohibited devices include laptops, earbuds, gaming devices, mp3/music/media players, cell/smart-phones, PDA's, Kindle/e-book readers, tablet computers, Apple/Google watch, i\* devices, multi-purpose wrist communicators, cameras, GPS/GIS devices, Google glasses, VR headsets, etc. Hearing aids are acceptable to use in accordance with the last item (disabilities) and procedures herein. From time to time the instructors may ask a student to look something up, but in most cases this is not necessary. If the student requests, such devices may be permitted, if the purpose is clearly articulated in advance. The student will be asked to put away their PED's if they are taken out in class; upon the second request, the student will be dismissed from class.

## **Graded Material**

### **Laboratory**

No labs are planned to be conducted this semester.

### **Examinations**

Exams, if required, are usually open book, calculators, etc., under pledged conditions; NO INTERNET is permitted. No examinations are planned to be given this semester. Two reading comprehension quizzes will be administered which will count with the course participation grading

### **Mini-Projects**

Mini-projects will be assigned during the semester in lieu of formal textbook or other research assignments. These are intended to be worked on in groups, and should utilize the efforts and ideas of the whole group for about a 2-week period. These assignments will be posted on Canvas. You may pick your own permanent team members, but the size of each team will be limited to an appropriate number (no more than three or four). DO NOT wait until the last minute to begin these mini-projects, you will not be successful.

### **Final Project**

A final project will be assigned which will be completed in the groups/teams which you have previously established. Sometimes a quantitative case is provided, other times the project may be based on your own research ideas, or on the various case studies included in your textbooks. You and your team will select a case/topic, and submit a brief prospectus to the instructor for approval.

### **Attendance**

Students are expected to attend class. Much material is presented in class which might not otherwise be in texts, notes, etc. Attendance will be reflected in the Class Participation portion of the course grade. Although we plan on keeping the course website up to date, if a student misses a class, then s/he is responsible for keeping up with the course material and finding out if any exams, quizzes, or homeworks have been assigned or scheduled. Similarly, important due date changes might sometimes be made in class to your benefit which might not be immediately posted on Canvas.

### **Software**

It is impossible to perform statistical/quantitative data analysis without some sort of computer software, and it is expected that the student will become proficient with one or more statistical software packages. The most widely used data analysis software in the real world today is

Microsoft Excel, and its capabilities are impressive. However, more specialized software is sometimes needed, such as Matlab, R/S-Plus, SAS, Python, SQL, Resampling Stats, SPSS, Stata, StatTools, StatExact, Lisrel, @Risk, Maple, Mathematica, C-Plex, etc. Of these, R and Python have become the choice of many because of their relative ease of use, availability of many specialty computational packages, and low cost (FREE!) [Download information](#) for some of these packages is available on the course website(s).

One can also program most statistical procedures in programming language such as Java, C/C#/C++, Fortran, VB, etc., along with specialized add-in routine libraries, but these require a lot of work to code and debug. Additionally, you will find that most corporate employers will not be paying for the nice software that is available for you here on campus. Consequently, to enhance your value to your future employer, we suggest that you become proficient in Excel, R/Python and SQL/SAS. This course does not mandate use of any particular software; at Rice, like in the real world, you may need to use several in the production of your reports.

Note that a good word processor will also be required in order to prepare reports and presentations; Microsoft Word, OpenSource, LaTeX, etc., are candidates for use in preparing these documents, although use of LaTeX in the business world is sparse. Online collaborative solutions such as Google Docs may be useful for initial collaboration, but your final work product will be a standalone document; please submit all work as a Microsoft product (i.e., not .wpd, .pages, etc.) Additionally, not all persons have the required Google account in order to use Google Docs.

### **Data Access**

One cannot perform quantitative ANYTHING without access to timely and accurate data. We are interested in pricing data, financial data, and in some cases economic data. In an era passed, much of the analysts' time was spent in back rooms pouring over company annual reports and slowly filling in the blanks on the columnar pad. Then the columnar pad was replaced with Visicalc and Lotus spreadsheets. These then turned into Microsoft Excel. And it remains this way today, except the annual reports are in some cases easier to obtain. (Unless you need annual reports very far into the past; unfortunately, it turns out most libraries no longer collect these reports).

A large part in developing your skills as quantitative analysts is to be able to find the data that you need. Fortunately, with the internet things are very easy today. However, "cut and paste" from websites is becoming increasingly more difficult, even with Excel's capability for snatching data via web queries, in part because Excel web query development is not keeping pace with websites' tending to not put data in static html table format<sup>2</sup>.

For example, suppose you are trying to get the components of the United States S&P 500 index; you used to be able to download the complete list from finance.yahoo.com at the link (<http://finance.yahoo.com/q/cp?s=^GSPC+Components>); however, now you have to download a page at a time which is a lot of work. To make matters worse, in 2011 Yahoo discontinued its service to provide constituents. To fix this you could get them in bulk from Standard & Poor's (<http://www.standardandpoors.com/indices/main/en/us>), but you first have to have established a login/password, which takes a few hours. Continuing the ominous trend for free data, Yahoo also changed its API in spring 2017 to no longer permit automated symbol data collection. The only know way to automate downloading lists of symbol data is to use R's most recent *quantmod* package.

<sup>2</sup> See, for example, <http://www.cboe.com/DelayedQuote/QuoteTable.aspx>. Enter a symbol, the data will appear but not be accessible via Excel web query because the query is based on static html tables.

Fee-based data vendors make data collection easier and more targeted or consistent; unfortunately, the access is expensive (\$3,000-\$10,000 per month), and no single vendor has everything you need (not even Bloomberg!) Fortunately for the Rice University student, several of the most expensive and useful databases are available, and we will be using them extensively. ([WRDS: CRSP, Compustat](#), etc.). We have established a class account for your use, and will provide limited overviews of how to use them, but it is your responsibility to learn how to navigate in the system and to validate the data that you might need to download. Please only use the class account, DO NOT request WRDS access from the university coordinator.

Additionally, the Jesse H. Jones Graduate School of Business (JGSB) is providing us access to its El Paso Corporation Finance Center (EPFC). In the EPFC you will have access to several very expensive data vendors such as ARGUS Valuation, Bloomberg Professional, Capital IQ, FactSet, Morningstar Principia, Palisade @Risk, Reuters 3000Xtra, and S&P Research Insight. Use of these data sources is limited only to your imagination. You will need to attend the overview session and sign the access agreement in order to gain access. We will announce the orientation session on Canvas, and in class; for more information also see the website:

<http://business.rice.edu/facility/el-paso-corporation-finance-center>

## Other Provisions

### Rice Honor Code

Before enrolling in this course, you must understand and agree to abide by the Honor System in place at Rice University which protects the academic integrity of all coursework. All students (including graduate students) at Rice are bound by the Rice Honor Code. The Honor Code is a unique feature at Rice, one that is valued highly, and is of profound importance. New students should familiarize themselves with the Honor Code before starting classes. Honor Code violations are very serious, and can lead to dismissal from the University. Suspected violations will be processed in accordance with (<http://honor.rice.edu>).

Examinations, if held, are conducted under pledged conditions. Proper recitation and use of the Honor Pledge on examinations will be required to avoid a possible penalty of up to 5% of the test grade. Note that the use of prior years' and other solutions to pledged exercises is considered UNAUTHORIZED AID and is not permitted under the Rice Honor code.

If homework and individual assignments/projects may be worked on with other class members, each student must submit their own work for credit. Homeworks should be submitted by each person, but you should indicate with whom you worked when applicable. No direct copying is allowed. Group projects and assignments may be submitted by the group, per submission requirements above.

### **Sponsored Message Regarding Student Responsibility:**

The Committee on Examinations and Standing has asked that we reiterate the responsibilities of the student to comply with deadlines affecting their status and standing. Essentially this means that you need to be aware of the deadlines for which you alone are responsible (i.e., not your advisor, etc.). This data is maintained on <http://registrar.rice.edu/calendars/>.

### **Religious Holidays**

If you wish to be excused from class on any of these days which do not coincide with University holidays already on the official academic calendar, you must notify the instructor in writing no later

than the second week of class. Absence from classes or examinations for religious reasons does not relieve students from responsibility for any part of the course work required during the period of absence

### **Disabilities**

Any student with a documented disability wishing academic adjustments or accommodation is required to speak with the instructor about it during the first two weeks of class. All discussions will remain confidential. Additionally, you must make sure this documentation is on file with Disability Support Services (Allen Center, Room 111 | [adarice@rice.edu](mailto:adarice@rice.edu) | x5841) in order to register your disability and to determine the accommodations you need. The instructor cannot be make accommodation without the appropriate letter from Rice DSS. Additional program and documentation requirements and responsibilities are spelled out at <http://dss.rice.edu/>.

### **Title IX.**

Rice University cares about your wellbeing and safety. Rice encourages any student who has experienced an incident of harassment, pregnancy discrimination, gender discrimination, or relationship, sexual, or other forms interpersonal violence to seek support through The SAFE Office. Students should be aware when seeking support on campus that most employees, including the course instructor/TA, are required by Title IX to disclose all incidents of non-consensual interpersonal behaviors to Title IX professionals on campus who can act to support that student and meet their needs. For more information, please visit <https://safe.rice.edu> or email [titleixsupport@rice.edu](mailto:titleixsupport@rice.edu)

### **Changes to Syllabus**

Changes to this syllabus may be published from time to time, with notice and explanation given in class and via Canvas (if used).

Rev: 12/30/2022
